

PRIYANSHU MUNDRA

Backend & AI Engineer · LLMs, RAG Pipelines & Scalable Distributed Systems
+91-9211370774 | mundrapriyanshu15@gmail.com | [Linkedin](#) | Gurugram, India

SUMMARY

AI-first Backend & AI Engineer with 3+ years building scalable backend systems and production LLM applications. I design and ship RAG pipelines, AI agents, and LLM-powered features, and I use AI dev tools (Claude, GitHub Copilot, Cursor) daily to accelerate delivery, code review, and testing. Proven record of cutting operational costs, improving processing efficiency, and shipping reliable AI-driven features end-to-end.

TECHNICAL SKILLS

Languages: Python (FastAPI, Flask, Asyncio), JavaScript/TypeScript (Node.js, NestJS, React.js), SQL
AI & ML: Generative AI, LLMs, RAG pipelines, prompt engineering, AI agents, LangChain, LlamaIndex, Hugging Face Transformers, PyTorch, vector databases (Pinecone, ChromaDB)
AI Dev Tools & Workflow: Claude, GitHub Copilot, Cursor, OpenAI & Anthropic SDKs, AI-assisted code review, test generation & debugging, agentic workflows, model evaluation
Backend & Systems: RESTful APIs, microservices, distributed systems, real-time data pipelines, performance optimization
Data: ETL pipelines, data preprocessing, feature engineering, embeddings, Pandas, NumPy
DevOps & MLOps: Docker, Kubernetes, Git/GitHub, CI/CD, AWS, monitoring & observability
Practices: Agile, TDD, OOP, system design

EXPERIENCE

- Cloudify — SDE II** Dec 2025 – Jun 2026
- Built AI-powered client applications with the OpenAI and Anthropic SDKs — LLM features, chat/assistant flows, and agentic automations — reducing manual effort across customer workflows.
 - Designed RAG-style retrieval and prompt pipelines to ground model outputs on client data, improving response accuracy and reliability.
 - Cut operational costs by 70% by migrating workloads to self-hosted infrastructure, including self-hosted model/inference serving.
 - Accelerated delivery using AI-assisted development (Claude, Copilot, Cursor) for code generation, review, and test coverage across multiple products.
 - Owned end-to-end feature development, debugging, and production issue resolution, delivering reliable client releases with ongoing support.
- Giichi IT Solution — Team Lead / AI Engineer** Jan 2024 – Dec 2025
- Led end-to-end architecture and delivery of enterprise cloud applications with AI at the core — integrating LLM features, RAG retrieval, and vector search into product workflows.
 - Built event-driven data and embedding pipelines that boosted platform processing efficiency by 30% and fed AI model training and inference.
 - Designed and refactored backend microservices in Python and Node.js to serve AI workloads, removing legacy processing bottlenecks and errors.
 - Rolled out AI-assisted development across the team (Copilot, Claude) and AI-generated test coverage, protecting release stability before AI feature ships.
 - Led sprint code reviews and architectural handoffs across a distributed team.
- PlutoPe — Senior Software Engineer, AI & Backend** Sep 2022 – Dec 2023
- Maintained secure, synchronized transaction APIs and backend routing engines, sustaining 99.9% processing uptime for live production pipelines.
 - Partnered with product and ML teams to embed predictive signal models and AI/rule-based processing layers into the core architecture.
 - Built the backend serving layer for AI features — model inference endpoints, thread-safe background workers, and self-healing task systems that eliminated concurrent data locks and performance stalls.
 - Optimized state-management and token-security flows across data-heavy modules; executed schema migrations to reduce payload latency for AI serving.

- Authored OpenAPI schemas and onboarding docs and mentored junior engineers on AI integrations and prompt/LLM workflows.

SELECTED PROJECTS

AI Customer-Support Chatbot (Award-Winning) — Built a conversational LLM assistant with intent handling and context-aware responses — won Best Chatbot Hack (sponsored by Travelers). Wired an NLP/LLM backend to a React frontend for real-time chat. *Stack: LLM, NLP, Node.js, React.*

Google Cloud AI App (Award-Winning) — Cloud-native application leveraging Google Cloud AI/ML services — won Best Google Cloud Hack for AI-driven functionality and clean cloud architecture. *Stack: Google Cloud, AI/ML APIs.*

PolluxChain — Layer 1 Blockchain & Polink Wallet — Architected a Layer 1 blockchain and built the backend for Polink, its native crypto wallet. Designed high-throughput backend services with Redis for caching and job queues, secure transaction/wallet APIs, and Solidity smart contracts for on-chain logic — focused on scalability, security, and efficient block and transaction processing. *Stack: Node.js, Redis, Solidity, Web3.*

Restaurant Management SaaS — Full-stack online/offline POS and operations platform covering end-to-end restaurant workflows, with offline-first sync and a single-point management dashboard. *Stack: Node.js, React, SQL.*

NFT Minting Platform & Smart Contracts — ERC-721/ERC-1155 contracts using OpenZeppelin and Beacon Proxy for gas-efficient upgrades, with a wallet-connect minting flow and a Web3 frontend; tested with Truffle/Hardhat. *Stack: Solidity, OpenZeppelin, Web3.js, React.*

ZebraSwap — DeFi DEX & AMM — Built core DeFi protocol components for a decentralized exchange — automated market maker (AMM) logic, liquidity pools, yield-farming strategies, and cross-chain integrations — with an emphasis on secure on-chain execution and performance. *Stack: Solidity, Web3, EVM.*

EARLIER EXPERIENCE

OranetAI — Software Engineer (*Nov 2022 – Aug 2023*). Built a SaaS restaurant-management platform from scratch — a single online/offline point of software covering end-to-end restaurant operations.

Self-Employed — Software Engineering Consultant (*Dec 2022 – Mar 2025*). Advised tech startups on full-stack and mobile app development (React Native, Flutter), backend architecture, and cloud data management (GCP, AWS), including integrating LLM/AI features and AI-assisted development workflows into their products.

Fiverr — Solidity Smart Contract Developer (*Oct 2022 – Oct 2023*). Deployed ERC-20/721/1155 contracts on OpenZeppelin; handled migrations and testing with Truffle/Hardhat, blockchain integrations via Infura/ConsenSys nodes, and React/Web3.js frontends.

onchain.vc — Blockchain Developer (*Feb 2022 – Aug 2023*). Designed and implemented smart contracts and blockchain solutions in Solidity and Rust; built and maintained APIs to interact with on-chain infrastructure, focused on security and scalability.

NoBroker.com — React.js Intern (*Feb 2022 – Apr 2022*). Built the web frontend in Next.js/React with a mobile-first approach; implemented an autocomplete search API on the ELK stack with ~3 ms latency and doubled app speed via optimized client/server API integration.

Goldman Sachs — Engineering Intern (*Nov 2021 – Dec 2021*). Researched industry-standard password-hashing techniques and recommended changes to harden transaction security against credential attacks.

KEY ACHIEVEMENTS & HONORS

- 1st Place — BlueSprint (competitive build sprint).
- Best Chatbot Hack (sponsored by Travelers) and Best Google Cloud Hack — hackathon awards.
- Top 10 Teams finish in a national-level hackathon.

CERTIFICATIONS

DeFi Talent Program — Frankfurt School of Finance & Management • Blockchain Development — Alchemy University • Web3Champion Certification • HackClub RAIT SoC Certificate

EDUCATION

B.Tech, Computer Science & Engineering — Lovely Professional University

CGPA 8.0
